Product Information

PRO RINSE AID

For dishwashing machines.

DESCRIPTION

Pro Rinse Aid is a drying agent which when added to the final rinse water of glass or dish washing machines, by means of a specially designed feeder, dramatically reduces drying time of washed articles. Pro Rinse Aid also markedly improves the finished appearance of crockery, glassware and cutlery by eliminating water spotting.

APPLICATION

Pro Rinse Aid is a moderately viscous liquid and contains ingredients which, when mixed with water at 60-90°C rapidly lowers the surface tension of water and prevents water from forming droplets on a surface. This product is equally effective in both soft and hard water as it contains a water softener and antiscaling agents.

Pro Rinse Aid eliminates the need for manual towelling of washed articles, thus reducing the possibility of spreading pathogenic organisms due to this method of drying. Pro Rinse Aid is safe on all metals normally found in the construction of dish washing and glass washing machines.

FEATURES AND BENEFITS

- Effective in hard or soft water.
- Eliminates spotting and streaking.
- Safe on metals and plastic-ware.
- Economical to use.
- Contains an antiscaling agent.
- Colour coded for safety and identification.

DIRECTION

Pro Rinse Aid is injected into the final rinse water on all machines using highly specialised electronic dosing equipment that injects the correct amount of product each time the rinse cycle is activated. The results obtained with Pro Rinse Aid are influenced by several factors, these being temperature of the final rinse water, efficiency of the dish washer rinse, residual heat held by the article being washed and the quantity of Pro Rinse Aid used.

Pro Rinse Aid is suitable for use in kitchens and food preparation areas.
